High Level Description:
Our website aims to help people improve their presentation skills by enabling them to upload scripts and practice them with a timed teleprompter. There will be three different modes which can be selected. The first is where the digital agent will just display a teleprompter, and the user can change the speed at which the teleprompter scrolls. In the second mode, users can upload a presentation to be displayed alongside the teleprompter script. The third mode involves just the presentation and a timer for how long each slide is displayed to help with pacing.

Target User Group: Students or working professionals
User Context: Anyone that wants to practice their presentation skills

Accessibility features: text-to-speech teleprompter (using the Web Speech API), high contrast mode, keyboard shortcuts, text size and scroll speed adjustments
